# Hürn Wasserkristallbilder

26. September 2008

# Grundsätzliches

- Wasser wird in eine Flasche gefüllt.
- Aus dieser Flasche werden 22 Tropfen einzeln auf einer Petrischale gefroren.
- Jeder gefrorene Tropfen wird einzeln unter dem Mikroskop fotografiert.
- Nicht auf allen Tropfen entstehen Strukturen die festgehalten werden können.

# Probenahme

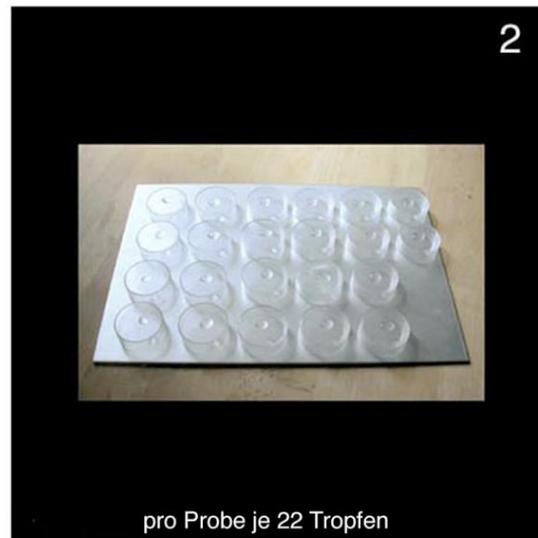

saubere Flasche füllen

mit Alufolie umhüllen

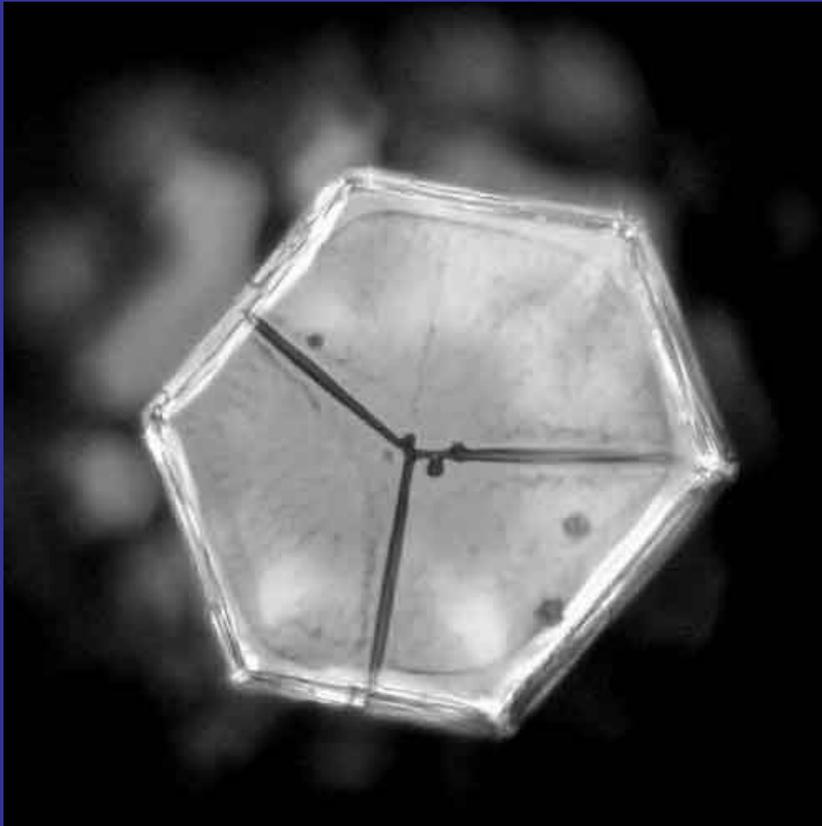

# Bilderherstellung

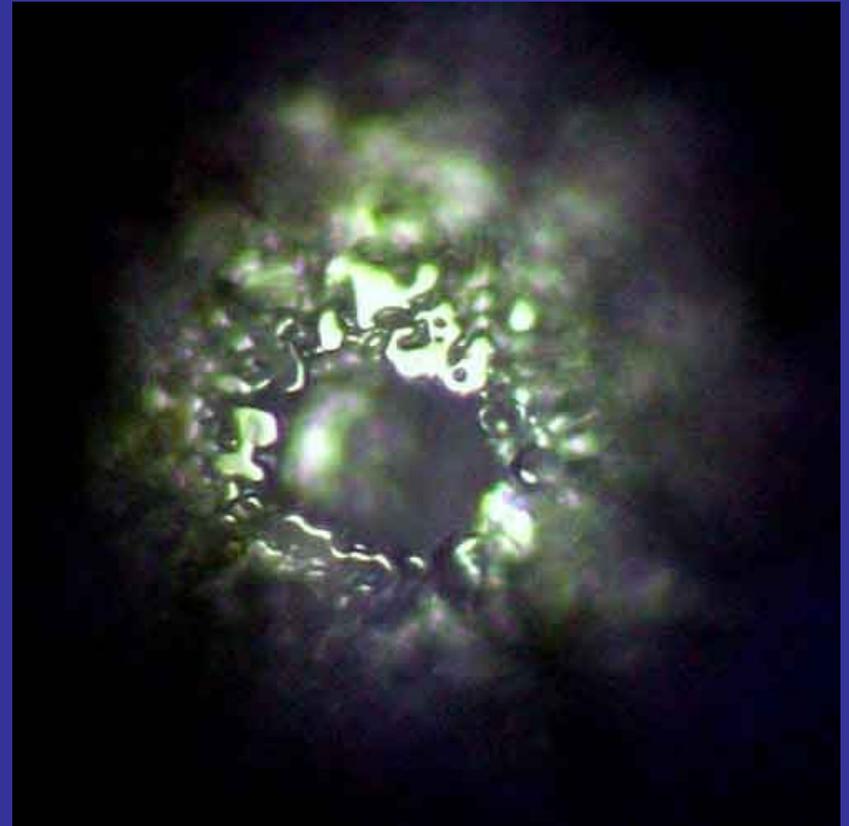

# Beispiele

Jeder Wassertropf hat ein eigenes  
Erscheinungsbild.

# Grundformen

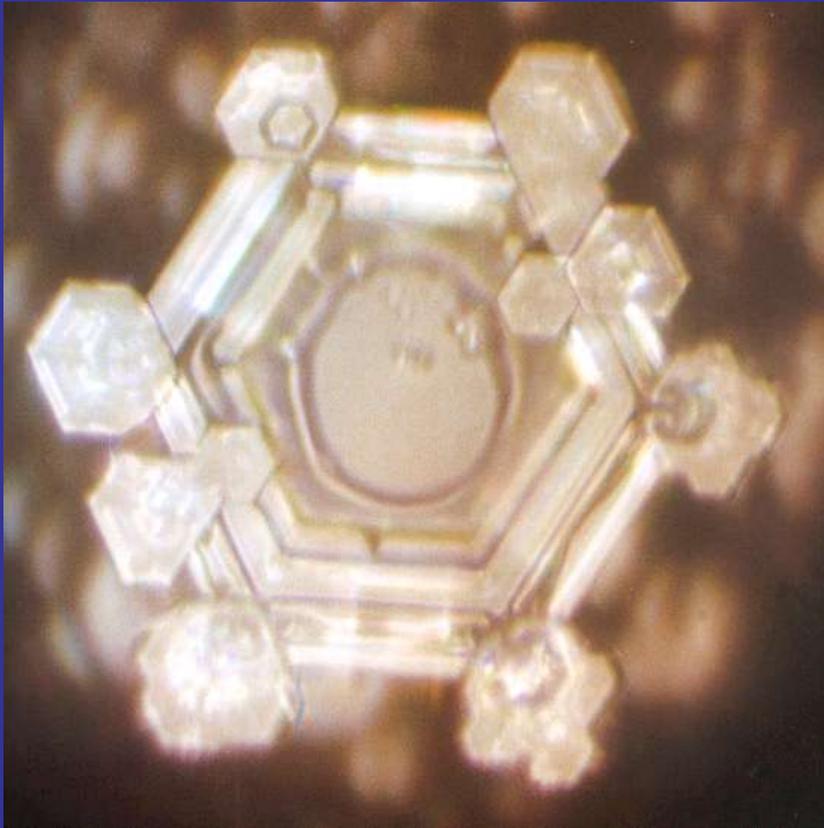

Natürliche Form

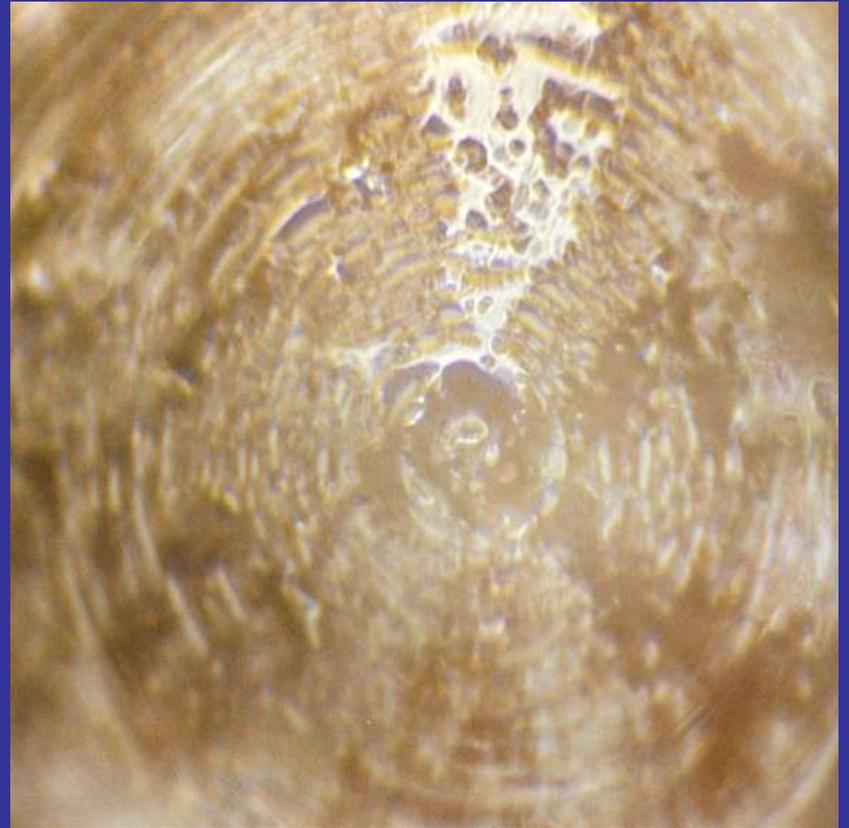

Energiearm

# Wasser hört Musik

Bach > Goldbergvariationen

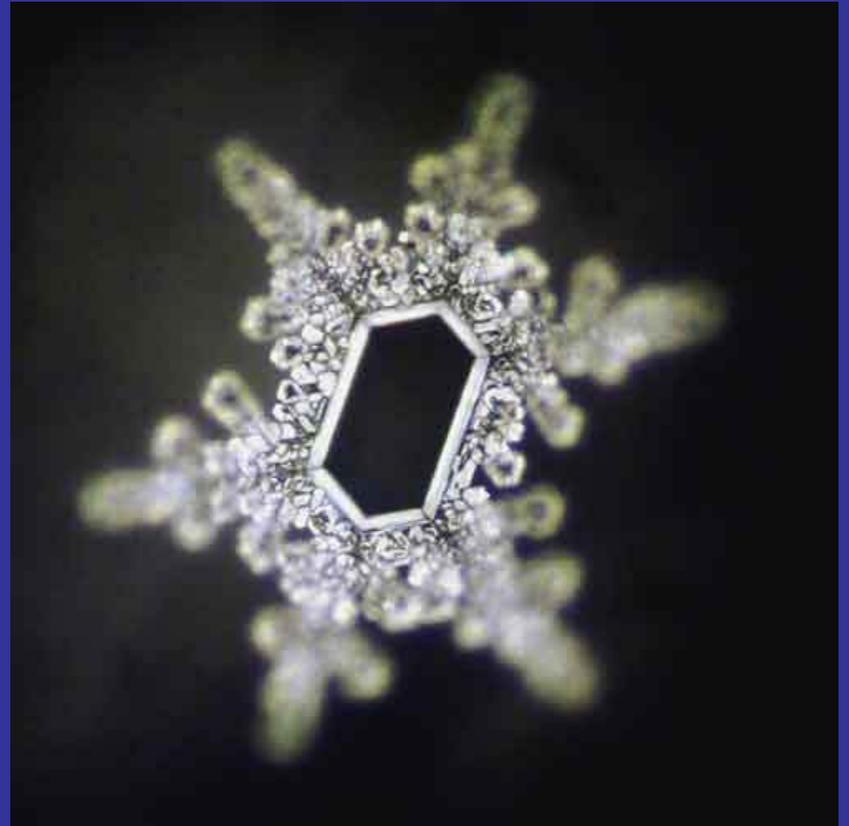

Heavy – Metal - Music

# Quellwasser

Lourdes

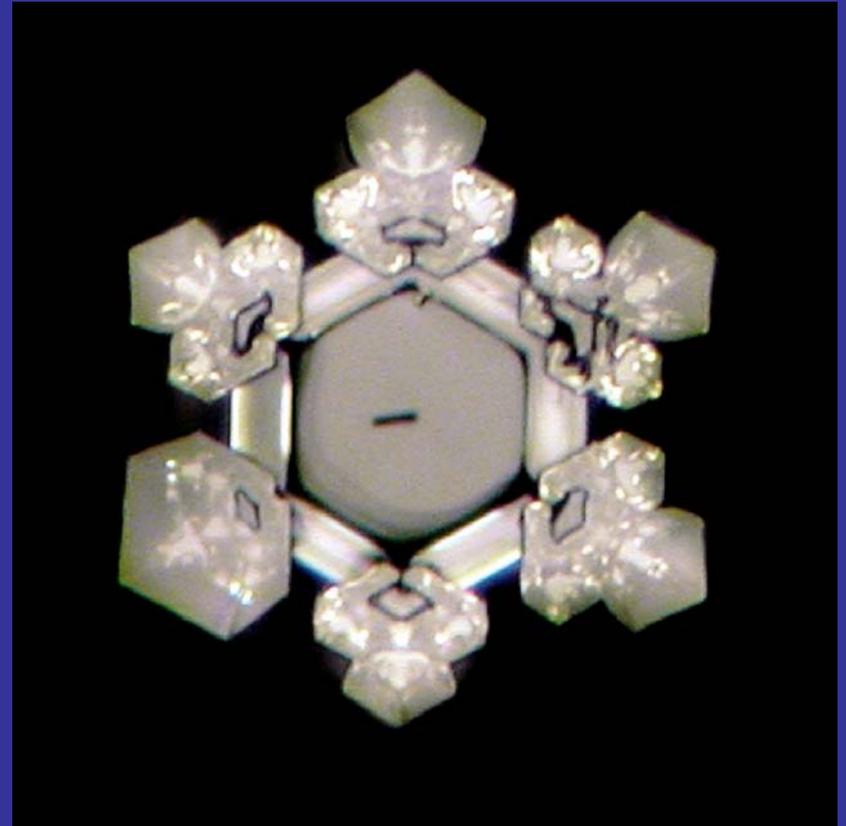

Rütihubelbad

# Seewasser

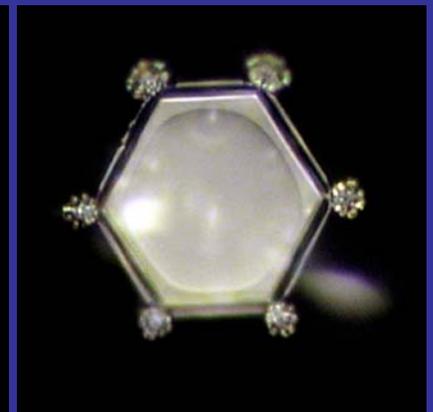

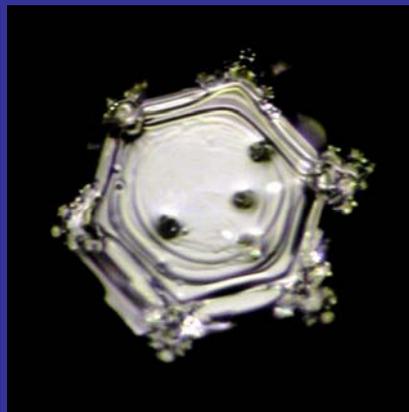

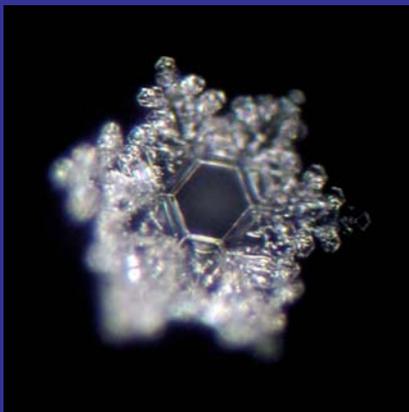

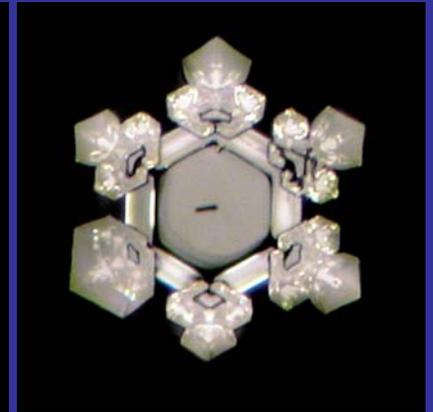

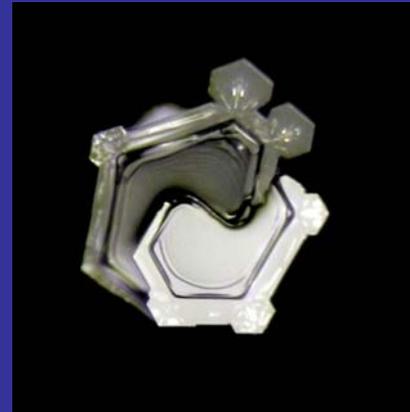

Vierwaldstättersee

Sempachersee

# Seewasser

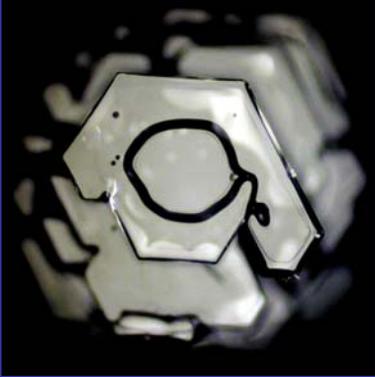

> je 4 Bilder von gleicher Probe

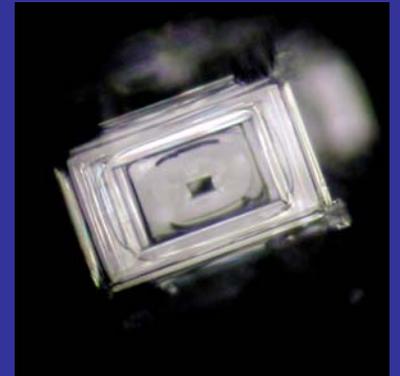

Vierwaldstättersee

Sempachersee

Jeder Wassertropf ist ein  
Informationsträger !

# Hörn Wasserkristallbilder

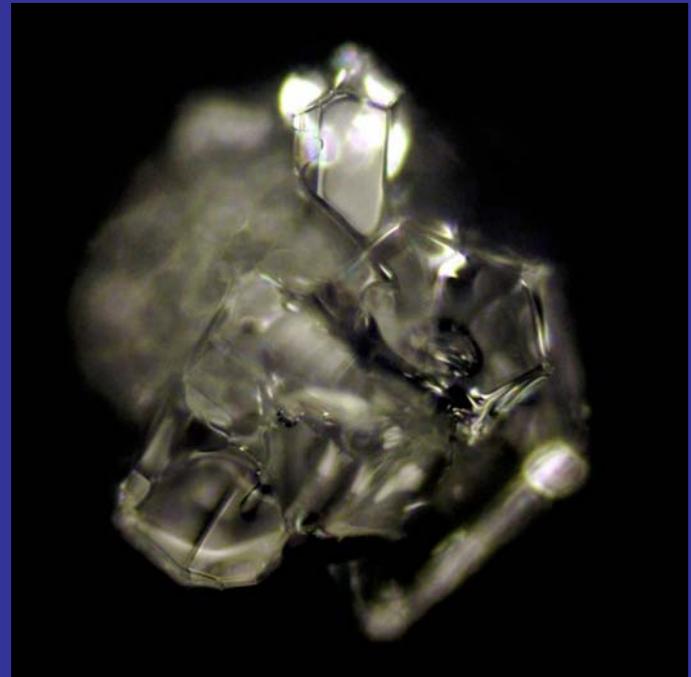

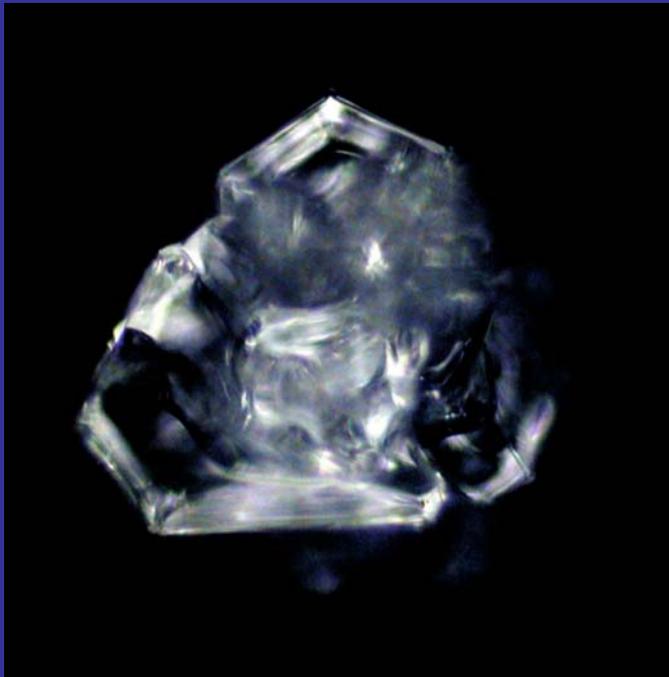

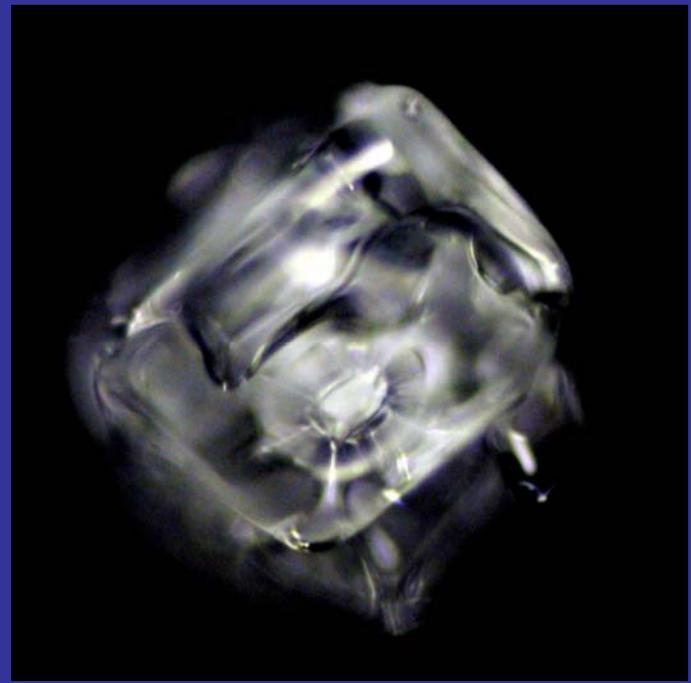

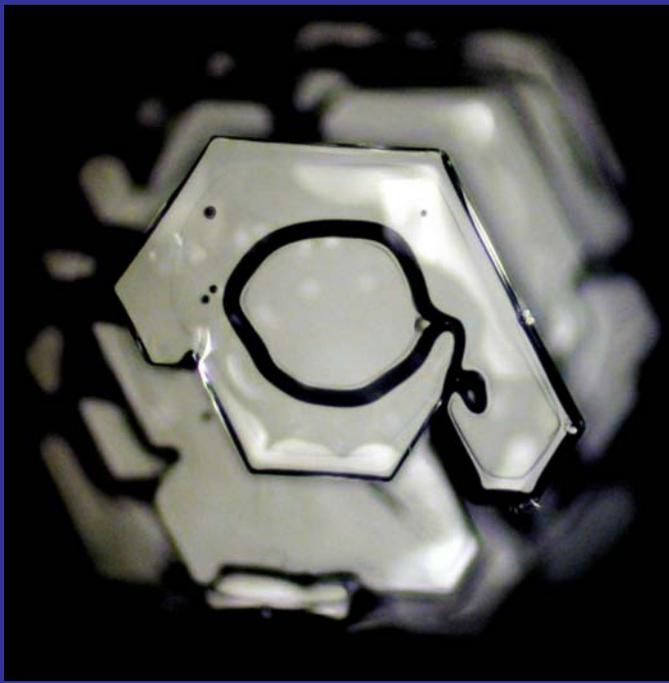

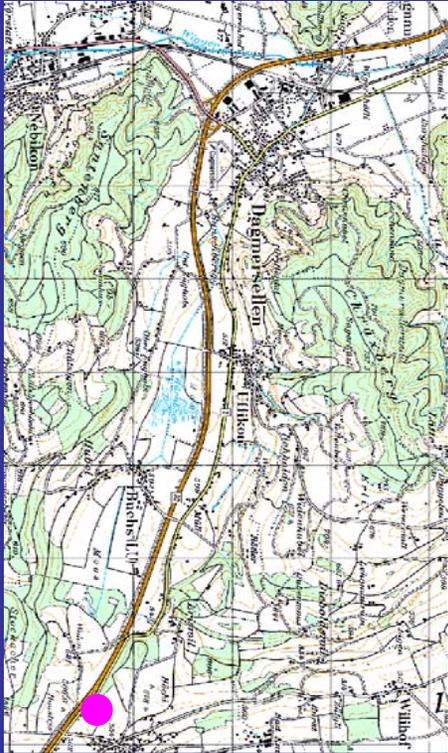

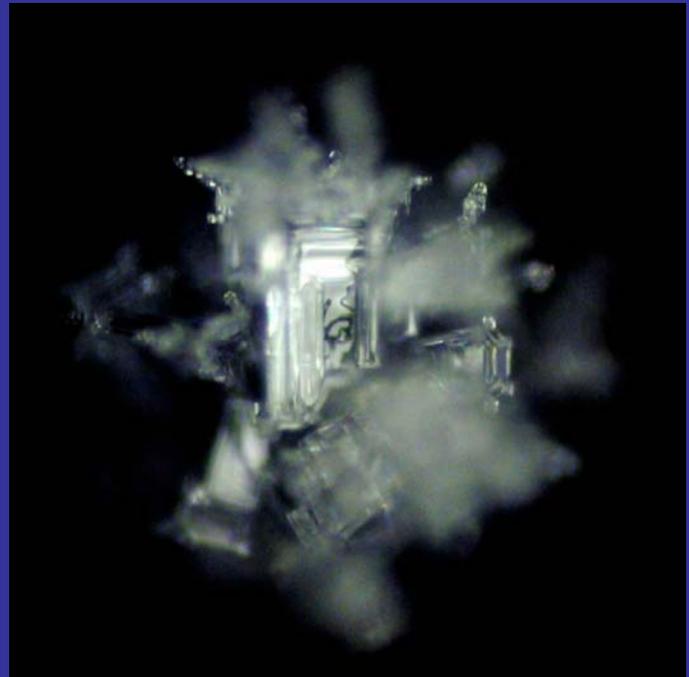

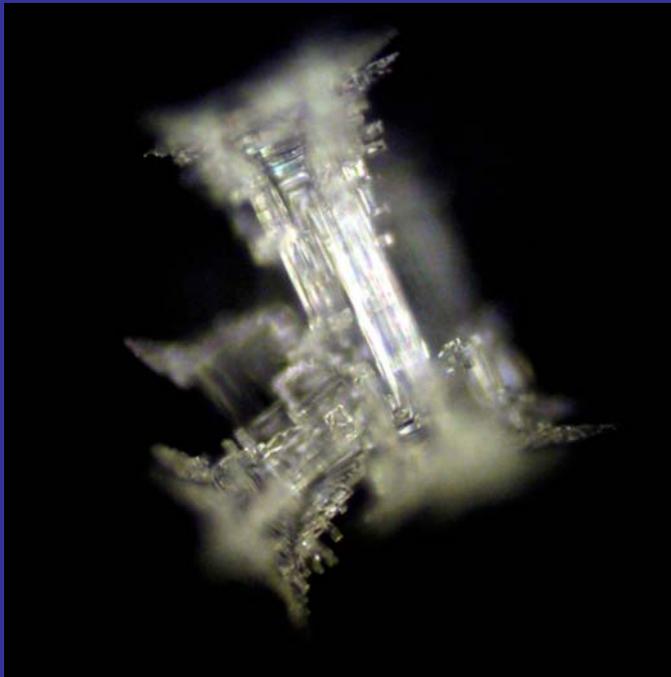

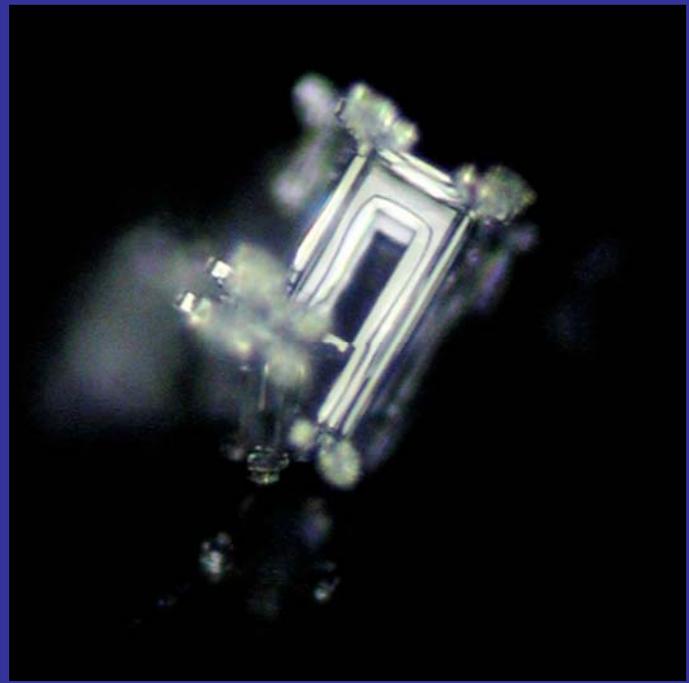

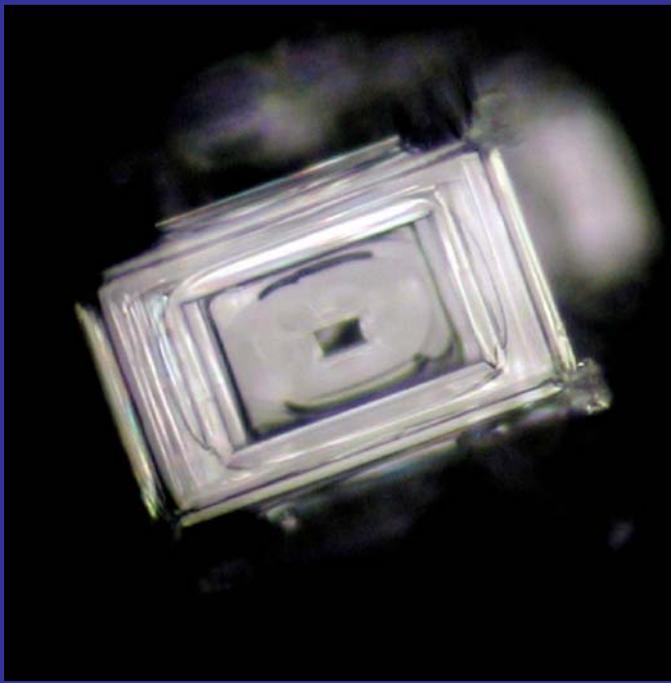

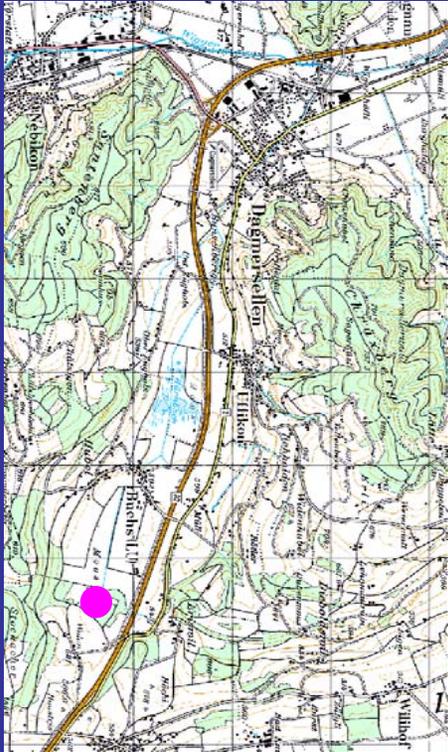

# Hürnbilder > Grundsätzliches

- Die Probenahme erfolgte am 26. 9. 2008 zwischen 10.30 und 12.30 Uhr
- Probefolge: Ab Ursprung bachabwärts
- Pro Probe-Ort werden 4 Bilder von 4 Wassertropfen der gleichen Flasche gezeigt.
- Diese 4 Bilder sind als Ganzes zu betrachten.

Mittagsgeläut

# Wie sind die Bilder beim Mittagsgeläut der Kirche St. Laurentius entstanden?

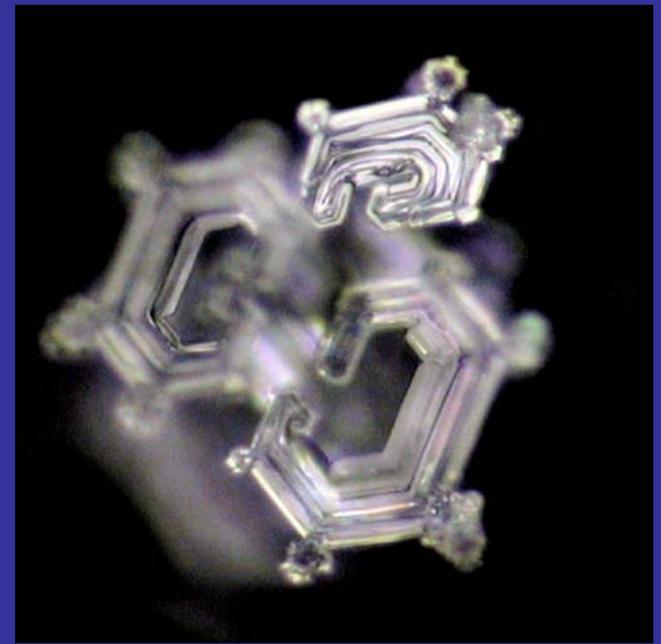

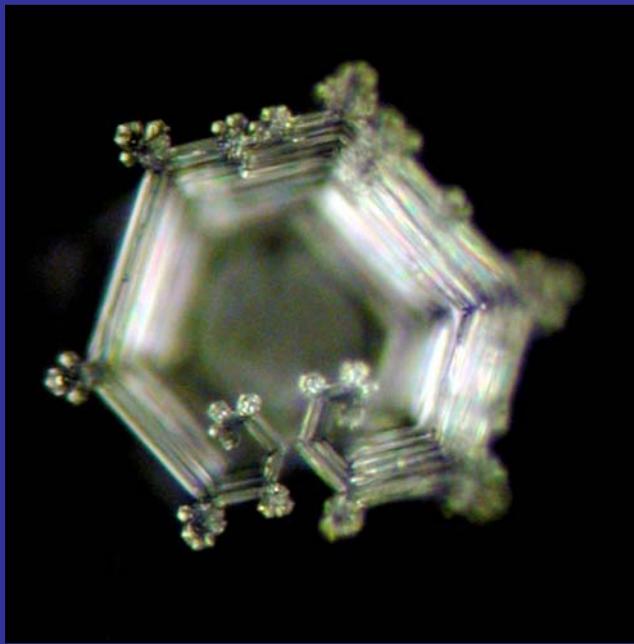

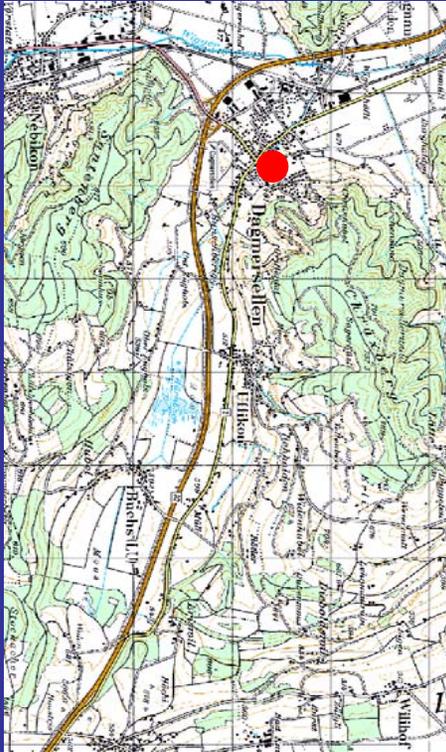

Ein Fläschchen mit destilliertem Wasser wurde während dem Mittagsgeläut unter die Glocken gestellt.

Wenn Tropfen von destilliertem Wasser gefroren werden entstehen Bilder mit nebenstehender Ausprägung.

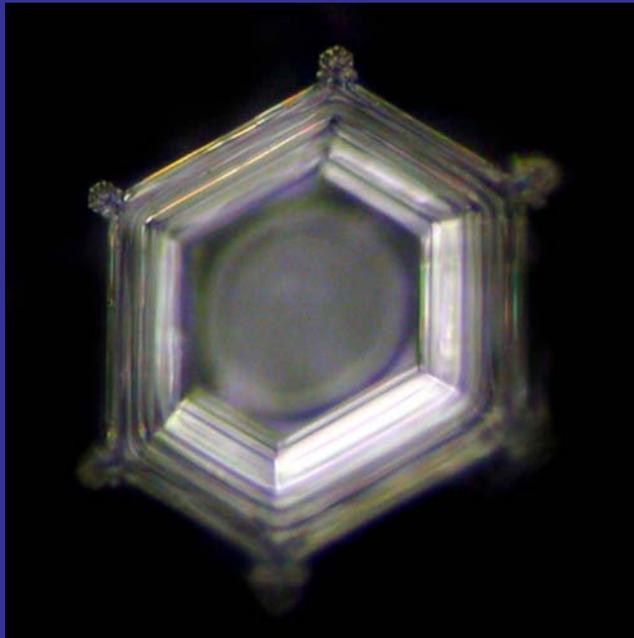

destilliertes Wasser

Dagmersellen  
Mittagsgeläut

Beachte die Veränderung

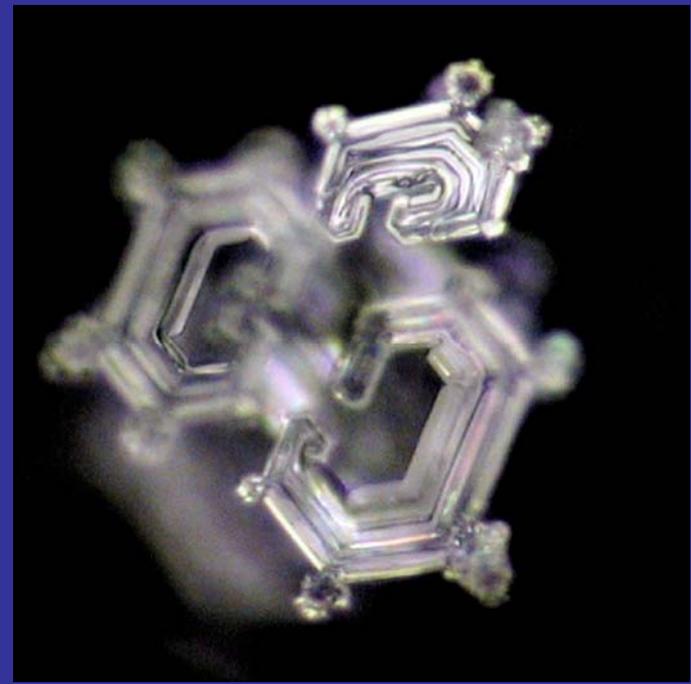

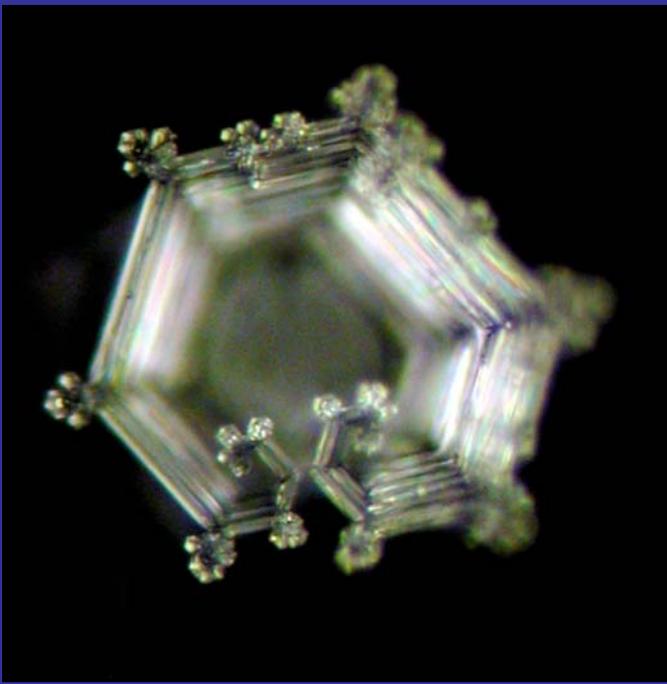

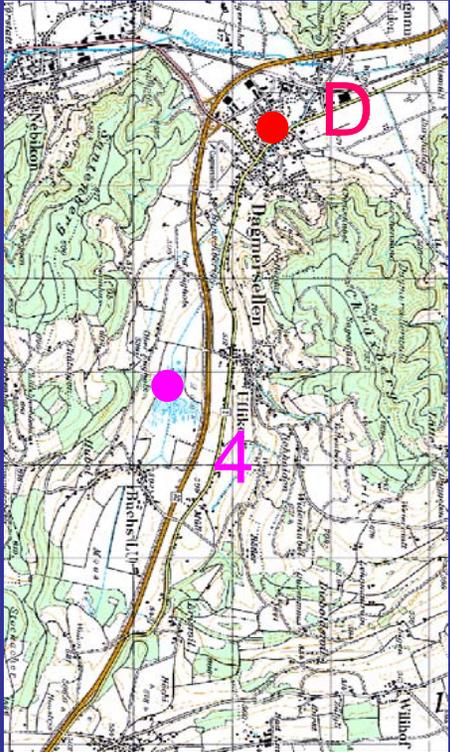

destilliertes Wasser

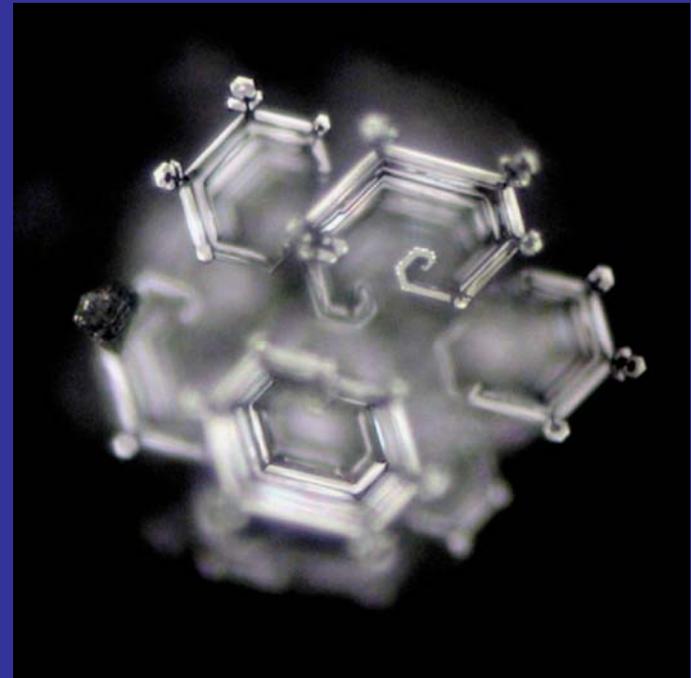

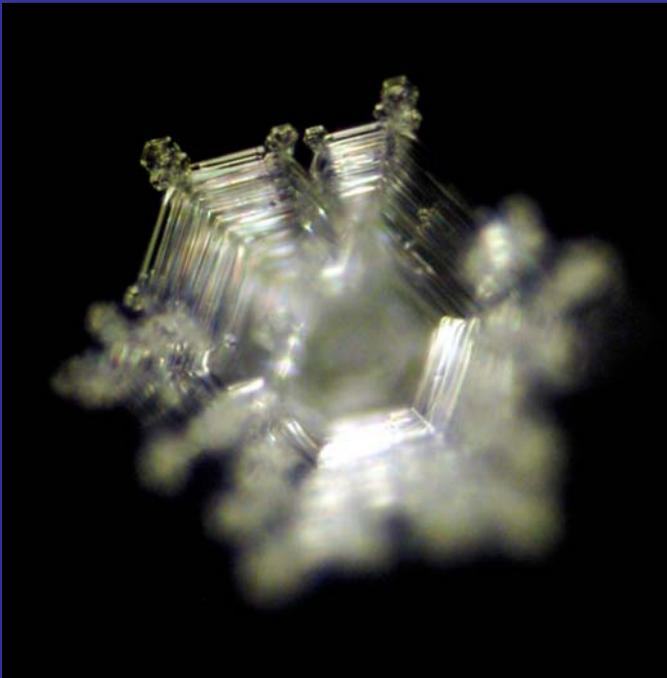

# Erläuterung

- Offensichtlich zeigen die Wasserkristallbilder Schwingungsmuster.
- Gibt es vergleichbare Schwingungsmuster unter den Proben?
- Auf der folgenden Folie sind oben Bilder der Kirchenglocken und unten vom Bereich Stienligraben.
- Vergleiche

Mittagsgeläut

Nr.4  
Uffikon  
Stienligraben

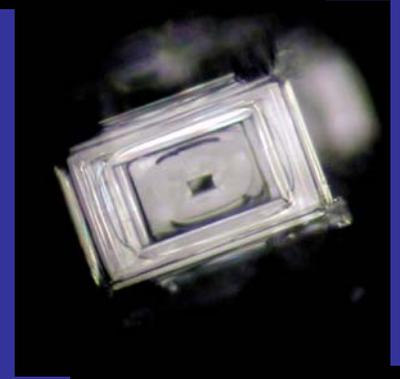

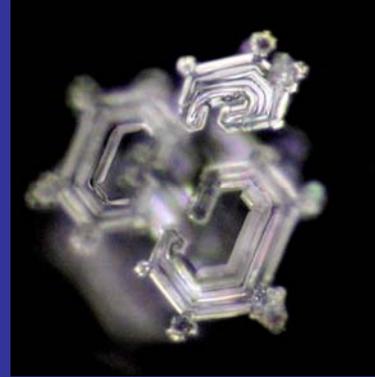

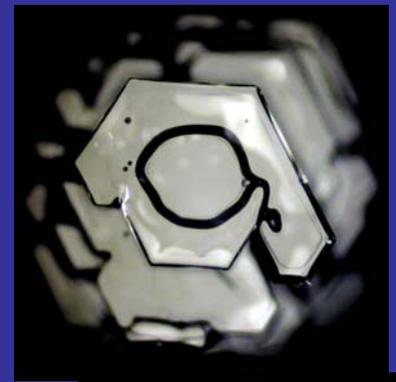

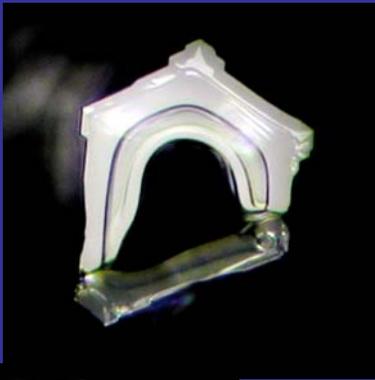

# Fragen dazu

- Lagern sich die Schwingungsmuster der Kirchenglocken in der Landschaft ab?
- Kann das Wasser diese Schwingungsmuster wieder abrufen?
- Welche Einflüsse haben Glocken- & andere Schwingungen?

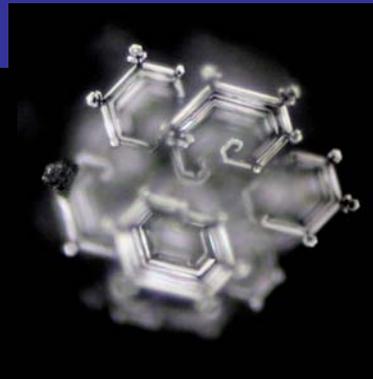

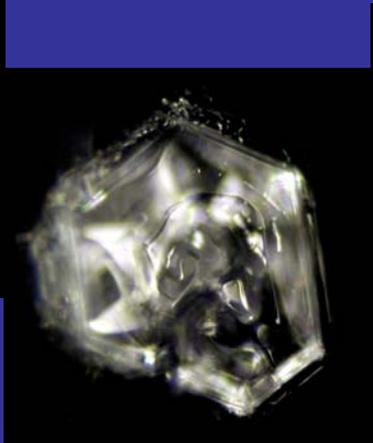

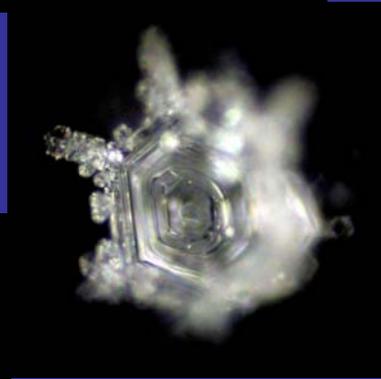

# Bezug zum Mensch

- Der Wasseranteil beim Menschen ist  $> 70\%$ .
- Was bedeutet dies für uns?

Jeder Wassertropf

ist einzigartig!
